

Setting up the eWAY Payment Gateway

To set up your eShop 4.0 with eWAY:

1. In the administration panel, go to **Administration > Payment methods**, then click on eWAY to begin editing.

2. Click on the 'Configure' tab.

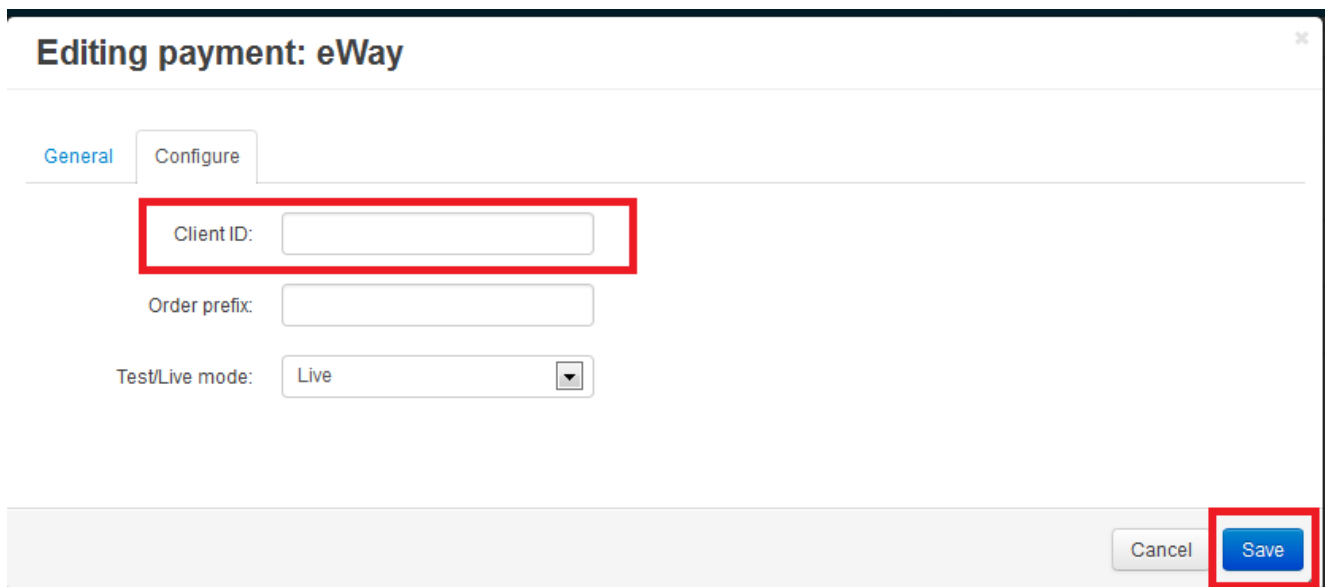

3. Fill in the following fields:

Client ID - enter the eWAY ID number.

Order prefix - any prefix you want invoice IDs to have on eWAY site (optional field) (for instance, *mycart*). Using the prefix allows to prevent duplicate invoice IDs in case you use the same eWAY account for accepting payment from several websites (eg, eBay, Amazon).

Click the **Save** button to save the changes.

4. Activate the payment method by clicking where you see '**Disabled**' and selecting '**Active**' from the resulting drop down menu.

5. Double check the payment method works! Do a test order to yourself - you will need to pay using your Credit Card. It's recommended to do this with a test product with the cost of \$1. Create a new product named test product with the cost of \$1, and give the product free shipping. For information on how to set up a test product with or without free shipping, click [here](#) for instructions.
