

How to create a new content page

To create a new content page in your eShop 4.0 website, follow the below.

1. Navigate to Website > Content.

2. Click the **+** symbol and then select **Add page**

3. **Parent Page:** If this is a completely separate page/topic, leave Parent Page as -Root level page-. If the page you're creating is to be a sub-page of a page that you've already created, click on the drop down menu and change -Root level page- and select the name of the page you want this to be listed as a sub-page.

Name: Name the page. This is what the title of the page will display.

Description: Enter in your content, images, etc into this section.

Once you're done, click **Create and Close** to return to the **Content** page list.
